Table 2. Complete results on the Soccer-GMR test set, with MLLM references

Our 14 runs: 1,036 queries (544 positive / 492 negative), τ = 0.6. Six paper Table 4 rows retain τ = 0.4. All values: %.

First 14 rows: our baseline / GMR / GMR + S4_minus_Fusion runs. Bold: best; underline: second-best among reported values.

All S4_minus_Fusion rows use epoch 4. FlashVTG-GMR uses the archived E0 run; its S4 variant uses the historical no-QCD epoch 4.

Our Rej-F1 and G-mIoU use τ = 0.6; AUROC is threshold-free; localization uses positives. No adapter-free FlashVTG run.

Parentheses: S4_minus_Fusion minus same-backbone GMR, in percentage points (pp); negative values indicate decreases.

Last 6 rows: published Table 4 values at τ = 0.4, not our reruns. Unreported mR@5 and G-mIoU cells are blank.
