SoccerGMR Performance Benchmark: Baseline vs. SI-Bind Variants (E6, GEQ, E9 / CAB)

Head-to-head evaluation across 9 temporal DETR backbones on Standard Test (1,036 queries) and Full-Decodable Test (2,970 queries). Strict single seed (2023).

		Standard Test Split (1,036 queries)				Full-Decodable Test Split (2,970 queries)

	4. GMR + SI-Bind (E9 / CAB - Ours)		*-- running / pending --*				*-- running / pending --*		

Method 1 (GMR Baseline): Official temporal DETR baseline checkpoints evaluated with native bipartite matching.
Method 2 (GMR + SI-Bind [E6]): Structural Triad (Temporal Residual Stream + Slot-Private Innovation + Dominance-Aware Refresh).
Method 3 (GMR + SI-Bind [E6] + GEQ): Two-stage Global Event Query fine-tuning on top of SI-Bind E6 representations.
Method 4 (GMR + SI-Bind [E9 / CAB - Ours]): Serial C -> A -> B Triad (Controlled Refresh -> Temporal Re-binding -> Context Innovation).
Orc-Gap (%): Area between Oracle envelope and G-mIoU@1 threshold curve across tau in [0, 1]. Lower is better.
Bold values highlight the optimal performance across methods per backbone. FlashVTG E6/E9 currently in queue.
