9-backbone exploratory subset · GMR baseline vs GEQ+aux

Fixed Val-selected checkpoints → Standard Test (1,036 queries)

Diamonds: Val ≥86% retention operating points (0.01 grid); ΔG1/G3 refer to these points.

Exploratory subset chosen after Test scan; excluded: Moment-DETR and LD-DETR.

Oracle envelope: max of the two methods with GT presence and each method's fixed candidates; analysis only.

Curves: 101 fixed thresholds, 0–1 score units. τ86 uses Standard Val only; the same threshold is used on both Tests.

mAP is ungated; Δ = GEQ+aux − matching auxiliary-trained GMR baseline. Subset selected on Test; all11 results retained.
