SoccerGMR Ablation Study: 9 Backbones × 3 Configurations

Comparing Baseline GMR vs. GMR + DQ-CGPv3 vs. GMR + DQ-CGPv3 + GEQ across Standard Test (1,036 queries) and Full-Decodable Test (2,970 queries). G1-AUC = integral of G-mIoU@1 across tau in [0.00, 1.00].

		Standard Test Split (1,036 queries)						Full-Decodable Test Split (2,970 queries)					
		Loc	*Overall*	*Existence & Null-set Rejection*				*Loc*	*Overall*	*Existence & Null-set Rejection*

1. GMR Baseline: Historical unaugmented GMR. 2. GMR + DQ-CGPv3: Plug-and-play DETR Query CGP (beta=0.05, K=16) between Layer 0 & 1.
3. GMR + DQ-CGPv3 + GEQ: Global Event Query head fine-tuned with BCE + native loss (lr=1e-5 / 3e-5, patience=10 on Val G1 mean).
G1-AUC (%): Area Under the Curve of G-mIoU@1 across 101 discrete presence thresholds tau in [0.00, 1.00] (higher is strictly better).
Bold values: Best performance among the available ablation variants within each backbone family.
