Delta = method - GMR baseline in the SAME dataset / Test split / protocol / backbone.

Green: gain Red: decrease Gray: unchanged. Deltas use source precision, then round for display. N/A: not applicable.

7440 weighted query rows (3720 positive / 3720 negative). Same positive pool as Test-ID; presence results differ.

N-acc = TN / negative queries; Rej-F1 treats rejection as the target class. Threshold = existence-score threshold.
